

ASHMIT RAINA

Sydney, NSW | 0451 015 793 | rainaashmit@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Penultimate-year Computing Science (Honours) student at UTS (WAM: 81.62), majoring in AI & Data Analytics with an AWS sub-major. Strong foundations in machine learning, agentic AI systems, and full-stack development with hands-on experience building and deploying production AI pipelines, real-time data systems, and LLM-powered applications.

TECHNICAL SKILLS

Languages: Python, SQL, JavaScript, Node.js, PowerShell, Bash

Systems & Architecture: Distributed systems, REST APIs, FastAPI, real-time data pipelines, ETL architecture, WebSocket streaming, low-latency design

ML & Algorithms: NLP, Transformers (BERT/SBERT/FinBERT), computer vision (YOLOv8, OpenCV, MediaPipe), statistical modelling, predictive analytics, NumPy, Pandas

AI Engineering: Agentic workflows, MCP, RAG systems, LLM fine-tuning

Infrastructure: AWS (EC2, S3), GCP, Docker, Supabase, PostgreSQL, Git

EXPERIENCE

Founder and Product Engineer | BlueCrewAI.com

May 2026 – Present

- Building AI agents for the Australian trades industry — shipped various agent MVPs; voice/text input → LLM-generated itemized quotes → professional PDF emailed to client automatically. Stack: Next.js, Railway, Supabase, Vercel, Anthropic Claude API.

AI Engineering Intern | Netveva

Remote Apr 2026 – Present

- Working with an Anthropic partner firm delivering AI enablement to enterprise and government clients across the Gulf region — building agentic workflows using the various LLM API and contributing to client-facing AI prototypes.

Treasurer | 180 Degrees Consulting UTS

Jan 2025 – Present

- Lead analytical problem-solving for client engagements, translating complex data into actionable insights; manage operational systems and reporting workflows for 50+ member organization.

Tech Executive | UTS AI Society

Oct 2025 – Present

- Design and deliver technical workshops on Python, Algorithms, and ML systems for 700+ student organization, coordinate AI hackathons and showcases around the UTS tech community.

TECHNICAL PROJECTS

SentimenTrade – Real-Time Financial Analytics Engine | Python, FinBERT, Yahoo Finance API, Plotly, Pandas

- Engineered a real-time market data ingestion and processing system, integrating live financial feeds (yfinance API) with NLP-based sentiment scoring (FinBERT) to correlate news signals with price movements.
- Built automated data pipeline architecture with sub-second processing latency, delivering interactive visualisations — demonstrating applied systems thinking in a high-frequency, data-intensive domain directly relevant to capital markets.

GuardianCam – High-Performance Real-Time Detection System | Python, YOLOv8, OpenCV, WebSocket, REST APIs

- Designed and implemented a low-latency computer vision pipeline processing live video streams through YOLOv8 object detection models with real-time WebSocket-based alert delivery — demonstrating high-throughput systems architecture.
- Engineered efficient data transformation workflows converting unstructured raw inputs into structured outputs at scale, with optimised memory management and concurrent processing design.

Platinum Pacific Partners Candidate Briefing Agent | Python, Claude API, Agentic Loops, Streamlit, JSON Schema Validation

- Built a two-step agentic ML pipeline (web research → structured JSON briefing) for Platinum Pacific Partners, a Sydney-based executive search firm specialising in Australian funds management.
- Deployed live on Streamlit with schema validation, graceful failure handling, and a confidence report flagging unverifiable fields — scored 96/100 by the client. Client feedback: Highly Positive

Autonomous Drone Navigation System | Python, YOLOv8, PyTorch, OpenCV, Deep Learning, HighRPD Dataset

- Trained a YOLOv8 model on the HighRPD dataset for autonomous drone navigation, implementing a real-time object detection pipeline for obstacle avoidance and path planning in dynamic environments.
- Built end-to-end deep learning pipeline covering data preprocessing, model training, evaluation, and inference — achieving strong detection accuracy across diverse aerial imagery conditions.

EDUCATION

University of Technology Sydney | Bachelor of Computing Science (Honours) — AI & Data Analytics | AWS Sub-Major Feb 2024 – Nov 2027

WAM: 81.62 (Distinction Average) | GPA: 6.13/7.0 | Relevant coursework: DSA, Deep Learning & CNNs, Machine Learning, Cloud Computing

Certifications: Deloitte Australia Data Analytics Job Simulation (Forage, Feb 2026)

Sydney | Student Visa Subclass 500
